

Transforming Oral Health for Families: Health Information Technology Assessment

Introduction

Background:

This assessment survey is being conducted to gain knowledge about factors that could impact the integration of health information technology (HIT) of oral health care into primary care at the state level. The information collected will help to inform the work on the Network for Oral Health Integration and the NOHI, a Health Resources and Services Administration cooperative agreement. The goal of the NOHI projects is to improve the oral health of children from birth to age 40 months and pregnant women through medical dental integration.

Instructions:

Please fill out the survey below to the best of your ability. If you are not able to obtain any of the requested information, please simply note that in your response. The survey may take about 7-10 minutes to complete.

Thank you for participating in our survey. Your feedback is important.
